(1) Conversion to Unique Farmland is primarily due to the delineation of a potted plant nursery on the Gridley quad and a nonirrigated orchard on the Nord quad.
(2) Conversion to Grazing Land is primarily due to land left idle or land used for dryland grain production for three or more update cycles.
(3) Conversion to Farmland of Statewide Importance due to a technical correction of soil data in the northwestern part of the county.
(4) Conversion to Other Land is primarily due to the delineation of low-density housing, farmsteads, rural commercial, mining facilities, and riparian areas.
(5) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Total Area Inventoried changed in 2008 due to a legal boundary change in which land was transferred from Fresno to Merced counties. This change was effective January 2008. Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Farmland of Local Importance due to land left idle or used for dry grain farming for three or more update cycles.
(4) Conversion to Other Land due to improved boundaries for riparian areas and canals. Additional conversions include a new compost facility and disturbed land with partial urban infrastructure.
(5) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Conversion to Farmland of Local Importance due to land left idle for three or more update cycles.
(2) Conversion to Unique Farmland is primarily due to delineation of nonirrigated orchards in the Elk Creek area.
(3) Conversion to Farmland of Local Importance the result of dry grain farming and the use of updated water district boundaries to delineate Farmland of Local Importance.

Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Grazing Land due to land left idle or land used for dryland grain production for three or more update cycles.
(4) Conversion to irrigated agricultural categories is due to new irrigated farmland, primarily in the San Joaquin and Antelope Valleys.
(5) Conversion to Other Land is primarily due to the delineation of low-density housing, farmsteads, rural commercial, and the expansion of oil extraction facilities.

(1) Improvements made to the 2006 data to accommodate the Rural Land mapping categories resulted in revised acreages for farmland, grazing and other land use categories than those published in the 2004-2006 California Farmland Conversion Report.
(2) Conversion among irrigated agricultural categories is due to the incorporation of updated digital soil survey data (SSURGO) into the 2008 Important Farmland data. This reflects modifications made to soil mapping by the U.S. Department of Agriculture as opposed to land use conversions.
(3) Conversion to Grazing Land due to land left idle for three or more update cycles, in sites scattered throughout the county.

(1) Total Area Inventoried changed in 2008 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages.
Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Prime Farmland is primarily due to nonirrigated orchards being converted to irrigated orchards.
(4) Conversion from Urban and Built-up Land is primarily due to the removal of water holding ponds and restoration at the site of a former landfill on the Detert Reservoir quad.

(1) Conversion from Farmland of Local Importance is due to dry grain areas being left idle for four or more update cycles.
(2) Conversion to Other Land largely due to the use of one foot resolution imagery to delineate low-density housing near the National Forest boundary on the Knowles, Ahwahnee, and North Fork quads.
(3) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Total Area Inventoried changed in 2008 due to a legal boundary change in which land was transferred from Fresno to Merced counties. This change was effective January 2008. Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Farmland of Local Importance due to land left idle or land used for dryland grain production for three or more update cycles.
(4) Conversion to Other Land (Vacant and Disturbed Land) primarily due to land left idle for three or more update cycles and has been graded for development.
(5) Conversion to Unique Farmland primarily due to the delineation of new orchards in the eastern foothill area.

(1) Total Area Inventoried changed in 2008 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages.
Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Farmland of Local Importance is due to the delineation of irrigated pastures and to land used for dryland grain production for three or more update cycles.
(4) Conversion to Farmland of Local Importance is primarily due to dry grain farming and the delineation of irrigated pastures on poor soils.
(5) Conversion to Other Land is primarily due to the delineation of low-density housing throughout the county.

(1) Total Area Inventoried changed in 2008 due to addition of that portion of the San Diego Area soil survey which covers southern Riverside County (CA638); as well as adoption of updated county boundary file. Statistics for these two revisions are depicted in the shaded cells in Part I (survey area addition) and Part III (county boundary adoption) of the table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Unique Farmland is primarily due to the delineation of potted plant nurseries in the county.
(4) Conversion to Farmland of Local Importance is due to land left idle or used for dryland grain production for three or more update cycles.
(5) Conversion from Urban and Built-Up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Conversion to Farmland of Statewide Importance is due to the delineation of irrigated agriculture that had previously been mapped as potted plant nurseries.
(2) Conversion to Farmland of Local Importance is primarily due to land left idle for three or more update cycles.
(3) Conversion to Other Land is primarily due to the delineation of low-density housing throughout the county.
(4) Conversion from Urban and Built-Up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.
(5) Due to a comment from the San Diego–Imperial Cattleman's Association, current imagery and SanGIS vegetation data was used as a guide to more accurately depict the extent of Grazing Land. This resulted in conversions to Grazing Land and Farmland of Local Importance, depending on soil type.

(1) Conversion to Unique Farmland is primarily due to the delineation of potted plant nurseries.
(2) Conversion to Farmland of Local Importance due to land left idle or land used for dryland grain production for three or more update cycles.
(3) Conversion to Other Land due to delineation of low-density housing, land left idle for three or more update cycles that has been graded for development, and mining expansions.
(4) Conversion to Unique Farmland is primarily due to the delineation of new irrigated crops, orchards, and potted plant nurseries.
(5) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Represents a survey addition encompassing the Carrizo Plain (CA667).
(2) Conversion to Other Land due to the addition of low-density housing.
(3) Conversion to Unique Farmland largely due to the addition of vineyards and of both irrigated and non-irrigated orchards throughout the county. One large change was due to conversion of irrigated pasture to irrigated crops.

Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Grazing Land due to non irrigated agricultural areas left fallow for four or more update cycles.
(4) Conversion to Other Land largely due to the delineation of oil fields on which grazing is not permitted, including the Cat Canyon, Orcutt and South Cuyama oil fields

(1) Conversion to Unique Farmland is primarily due to the delineation of potted plant nurseries in the county.
(2) Conversion to Other Land is due to the use of detailed digital imagery to delineate low-density housing, farmsteads, dairies, and ecological restoration areas throughout the county.
(3) Conversion to Prime Farmland and Farmland of Statewide Importance due to a technical correction to soil data in the county.
(4) Conversion to Unique Farmland primarily due to the delineation of irrigated crops on land formerly mapped as irrigated pasture.
(5) Conversion to irrigated agricultural categories is due to new irrigated farmland, primarily almond orchards, in the northern and eastern portions of the county.
(6) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Conversions between irrigated agricultural categories primarily due to either new potted plant nurseries or the conversion of potted plant nurseries to irrigated cropland.
(2) Conversion to Farmland of Local Importance due to land left idle or used for dryland grain production for three or more update cycles and delineation of confined animal agriculture facilities.
(3) Conversion to Farmland of Statewide Importance is due to newly irrigated farmland, primarily in the northwestern and southern parts of the county.
(4) Conversion to Other Land primarily due to the addition of low-density housing and wetland expansion on the Hacienda Ranch NE quad.
(5) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.

(1) Conversion to Farmland of Local Potential largely due to farmland fallowing on P and S soils (per Yolo County's Farmland of Local Importance definition) for three or more update cycles.
(2) Conversion to Other Land due to the addition of permanent wetlands near Zamora and low density housing throughout the county.
(3) Conversion to Grazing Land the result of fallowing dry grain areas for four or more update cycles, primarily near the Dunnigan Hills.
(4) Conversion to Grazing Land due to farmland fallowing for three or more update cycles.

2008 County Boundary Adjustment (1)		96	20	5	0	121	0	121	0	76	0	197

(1) Total Area Inventoried changed in 2008 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages.
Statistics representing this change are shown in shaded cells in Part III of table.
(2) 2006-08 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.
(3) Conversion to Other Land is primarily due to the use of one foot resolution imagery to delineate low-density housing throughout the county, and the addition of wetlands on the Honcut quad.
(4) Conversion from Urban and Built-up Land primarily the result of the use of detailed digital imagery to delineate more distinct urban boundaries.
