STATE OF CALIFORNIA
CALIFORNIA GEOLOGICAL SURVEY
PRELIMINARY REVIEW MAP
DURMID QUADRANGLE
Released: March 7, 2012

REFERENCES USED TO Compile FAULT DATA:
Daniel F. Grubb

IMPORTANT – PLEASE NOTE
1) This map may not show all faults. Faults that have the potential for surface fault rupture, either within the Earthquake Fault Zones or outside fault boundaries,
   may be located within or adjacent to the areas shown.
2) Faults shown are the basis for establishing the boundaries of the Earthquake Fault Zones.
3) The location and orientation of faults are based on the best available data. However, the actual fault paths and other details may differ from what is shown.
4) Fault information on this map is not sufficient to serve as a substitute for the geologic site
   investigations required under Chapter 7.7 of Division 7 of Title 2 of the California Public
   Resources Code.
5) This map does not show Detailed Hazard Zones. If any fault may exist in the area, please
   refer to the latest Office of Emergency Services Hazard Zone Map for additional information.
6) DISCLAIMER: The State of California and the Department of Conservation assume no
   responsibility or liability regarding the accuracy of the data from which these maps were drawn. Neither the State nor the Department shall be liable for any errors or omissions or for any improper use of the data. Further
   information on the effects of earthquakes on your property can be obtained from local authorities, such as a private
   structural engineer or seismologist.
