

PUBLIC HEARING

KERN RIVER AQUIFER EXEMPTION

This public hearing invites community input on a proposal to expand the currently exempted aquifer boundary for the hydrocarbon-producing portion of the Kern River Reservoir within the Kern River Oil Field. If approved, the proposal would acknowledge the existing water quality conditions and allow a larger area to be considered for underground injection. Any operators seeking to inject in the expanded area would still be required to obtain separate regulatory approval.

Why Attend?

Learn about the proposal and share your input with state officials.
