STATE GEOLOGIST

RADIOMETRIC AGES OF ROCKS IN THE CHICO QUADRANGLE, CALIFORNIA SCALE 1:250,000

The map and accompanying table present a summary of radiometric ages determined from rock samples collected within the Chico 1° X 2° quadrangle. The ages used in this compilation are those reported in the references cited (based on decay constants accepted at the time of their publication), as well as recalculated ages using the standardized decay constants adopted by the IUGS Subcommission on Geochronology (Steiger and Jäger, 1977). Tables for the conversion of K-Ar ages from old to new constants (Dalrymple, 1979) were used for this purpose.

Each location plotted on the geologic map is keyed by number to the table and accompanied by information pertaining to the dating method used, age, and mineral or material dated. The ages shown on the map have been recalculated where necessary. The ages, sample location, name of quadrangle where sample was taken, sample description, reference cited, and original sample number are shown on the accompanying table.

This compilation makes no attempt to interpret the data presented or to evaluate the validity of the ages reported. The readers, therefore, are advised to refer to the original reference for interpretive information.

These data were compiled from all known sources through May 1989. If any published or unpublished references containing radiometric ages have been overlooked, we would appreciate being informed. Please send any additional data to: George J. Saucedo, Department of Conservation, Division of Mines and Geology, 1145 Market Street, 3rd Floor, San Francisco, CA 94103-1513; or telephone (415) 557-1529

Footnotes:

¹Method abbreviations: AA = ⁴⁰Argon/³⁹Argon; KA = Potassium/Argon; RS = Rubidium/Strontium; UPb = Uranium/Lead.

²Mineral or material abbreviations: B = Biotite; Ca = Carbonate; H = Hornblende; KF = K-feldspar; M = Mica; P = Plagioclase; Q = Quartz; S = Sanidine; WR = Whole Rock; Z = Zircon.

³Steiger, R.H., and Jäger, E., 1977, Subcommission on geochronology: Earth and Planetary Science Letters, v. 36, p. 359-362; Dalrymple, G.B., 1979, Critical tables for conversion of K-Ar ages from old to new constants: Geology, v. 7, p. 558-560.

⁴Not applicable; new constants were used in original calculation or dating method does not require recalculations.

⁵Rubidium/Strontium mineral isochron.

*Latitude and longitude interpreted from written descriptions of locations or from locations plotted on maps in the original reference.
