Radon Potential Zone Map for Ventura County, California

By
Ron Churchill
Senior Geologist
California Geological Survey
August, 2006

LEGEND:

Radon Zone Definitions:
- High Potential For Indoor Radon Levels
  Above Four Picocuries Per Liter
- Moderate Potential For Indoor Radon Levels
  Above Two Picocuries Per Liter
- Low Potential For Indoor Radon Levels
  Above One Picocuries Per Liter

Base Map Layers:
- National Forest
- Parks and Recreational Areas
- Lake
- River
- Major Road
- Minor Road/ Street
- Airport
- Major Road
- Minor Road/ Street
- Happy Camp Canyon National Forest
- Ventura County Parks
- Moorpark Regional Park
- Piru Regional Park
- Santa Paula Regional Park

MAP USAGE AND LIMITATIONS

This map identifies areas within Ventura County where geologic conditions are favorable for elevated indoor radon levels. The map is intended to assist national, state and local governments and organizations in making informed decisions about radon mitigation strategies.

The California Geological Survey recommends that all homes within Ventura County be tested for radon, regardless of geographic location. Homes with elevated radon levels should be taken seriously and appropriate steps taken to reduce radon exposure.

Additional information about radon can be found at the following websites:

- California Geological Survey, phone (916) 445-1825
- State of California - Arnold Schwarzenegger, GOVERNOR

THE RESOURCES AGENCY - MIKE CHRISMAN, SECRETARY
STATE OF CALIFORNIA
