

Farmland Mapping and Monitoring Program

Status of Confined Animal Agriculture Facilities in Important Farmland GIS Data (2016)

Confined Animal Agriculture facilities include dairies, feedlots, poultry facilities, and aquaculture (fish farms). These uses do not qualify for the major agricultural categories on the Important Farmland Maps, however, some counties include them in their Farmland of Local Importance definitions. In the nine counties mapped to Rural Land Use standards, Confined Animal Agriculture is shown as a separate category on the maps.

For real estate disclosure purposes, Confined Animal Agriculture facilities should be considered agricultural in the counties marked YES in both columns below.

County	Confined Animal Agriculture Data in GIS Files	Confined Animal Agriculture in County Local Definition
Alameda	No	No
