</tbody>
</table>
Footnote (1): Total Area inventoried changed in 2018 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages. Statistics representing this change are shown in bottom cells in Part III of table.

Footnote (2): 2016-18 Acreage Changes calculates conversions within existing mapped area; county boundary adjustment acreages not included.

Part 2: Land Committed to Nonagricultural Use
Data not available for Land Committed to Nonagricultural Use.

Part 3: Land Use Conversion from 2016-2018
Due to the large size of this table, it has been split into two tables. Table One has the conversions of all land uses to the Important Farmland categories (Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance, and Important Farmland Subtotal) and Table Two has the conversions of all land uses to the remaining land use categories (Grazing Land, Agricultural Farmland Subtotal, Urban and Built-up Land, Other Land, Water Area, and Total Area inventoried).

</tbody>
</table>

Footnote (1): Total Area inventoried changed in 2018 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages. Statistics representing this change are shown in bottom cells in Part III of table.

Footnote (3): Prime Farmland conversion to Unique Farmland is primarily due to soil unit changes from the incorporation of the 2018 statewide gridded soil survey and the identification of a potted plant nursery.

</tr>
</tbody>
</table>

Footnote (1): Total Area inventoried changed in 2018 due to adoption of updated county boundary file; adjacent counties gained or lost corresponding acreages. Statistics representing this change are shown in bottom cells in Part III of table.

Footnote (4): Conversion from Urban and Built-up Land is primarily due to a lack of sufficient infrastructure and the use of detailed digital imagery to delineate more distinct urban boundaries.
